

KING STREET COMPLETE STREETS PROJECT

BETWEEN RADFORD STREET AND JANNEYS LANE

CONSTRUCTION

Construction of the approved King Street Complete Street Project is underway. The curb ramp work has been completed. Paving work began on August 13th and will continue for the upcoming weeks, with the goal of completing before Labor Day, pending any weather delays.

The speed limit has been reduced from 35 mph to 25 mph between Janney's Lane and Quincy Street as approved by the City Manager. While the roadway is under construction, drivers should be especially cautious with their speeds.

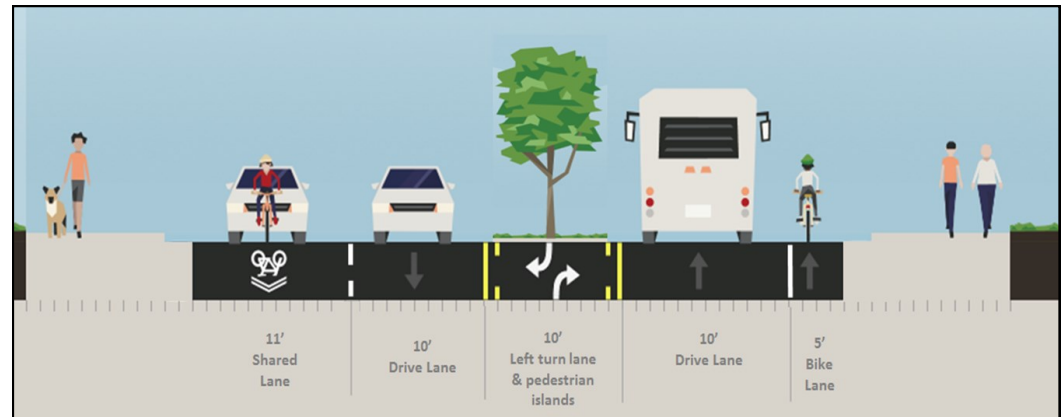

Once the street resurfacing is complete, the new markings will be installed and construction of the pedestrian refuge islands will begin. Trees will be planted early this fall.

PROJECT DESCRIPTION

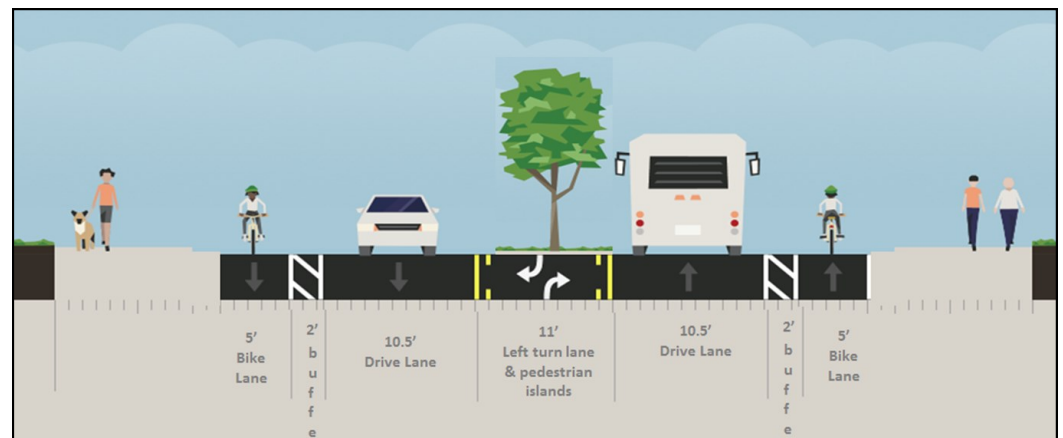

The portion of King Street between Janneys Lane and Radford Street was scheduled to be resurfaced in August 2016. As part of that project, the street was evaluated for multimodal improvements. The City hosted public meetings to solicit feedback from the community about this corridor. Based on the input from the community, and approval by the Traffic & Parking Board, the following improvements will be made:

- Remove westbound travel lane along corridor and remove eastbound travel lane between Chinquapin and Janneys.
- Provide planted pedestrian crossing islands with opposing left turn lanes at intersections
- Provide turn lanes at T.C. Williams to better process traffic
- Install buffered bike lanes except in front of T.C. Williams
